

Bastion Controls

Capability Statement | IT and Cybersecurity Services | Revised October 17 2026

Bastion Controls L.L.C. is an emerging IT services business developing defined subcontracting, teaming and commercial support opportunities. We align each proposed work package with qualified personnel, verified availability, and customer requirements before making a delivery commitment.

Initial partnering focus

Technical documentation and IT project support: standard operating procedures, knowledge bases, configuration documentation, requirements tracking, status reporting and transition coordination. Work samples, technical review, scope and personnel availability are established for each engagement.

Additional service development

We are developing opportunity-specific capacity in end-user support, systems administration, networking and defined cybersecurity support. These services require qualified delivery personnel, backup coverage, suitable tools and applicable customer security requirements before commitment. Inclusion here does not represent an immediately staffed service desk, continuous monitoring operation or incident-response service.

Relevant founder experience

Anthony Griffin | Founder and Chief Executive Officer. Army infantry veteran with 16 years of aviation experience and a background in technical writing and procedure-driven technical operations. This is individual experience, separate from Bastion’s corporate past performance.
